# LAMPKIN 701

ACCESSORY TO L. L. MODEL 109

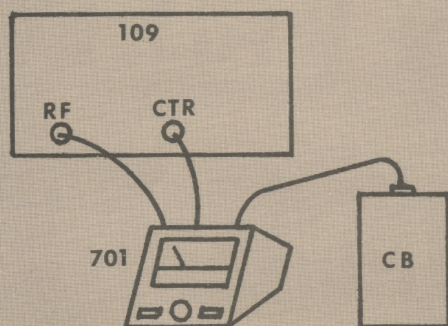

## CB WATTMETER CB DUMMY LOAD 109 INTERFACING

### FEATURES

Dummy Load ..... 15 W  
Wattmeter ..... 0-5W  
                                    0-15 W PEP

Signal Switching  
Signal Leveling  
Single hook-up, to CB  
109 Full protection  
(Fused Pad not required)

The Model 701 when used as an accessory to the Model 109 Service Monitor, simplifies and speeds up the daily servicing of CB transceivers.

By attaching only one cable to a transceiver, the 701 provides a 15 watt dummy load and a wattmeter reading of transmitter power output. The 701 switches the transmitter signal properly leveled either to the Model 109 counter for frequency measurement, or to the RF input enabling a simultaneous reading of power, frequency and percentage modulation. The 109 Signal Generator is also coupled directly to the receiver through 40 db attenuation in the 701.

The transmitter may be keyed at any time the 701 is in usage, providing full protection to the Model 109.
